Website: socralee.github.io | Availability: Jun. 2027 - Sep. 2027

Education

University of Washington, Seattle , PhD in Computer Science and Engineering	Sep. 2024 – Now
• Research Area: Foundation Model in Biomedicine, Natural Language Processing	
University of California, Berkeley , MEng in Operations Research	Sep. 2023 – May. 2024
• Core GPA 4.0: Probability Theory (A+), Financial Engineering (A+), Optimization Analysis (100)	
Peking University , BS in Data Science	Sep. 2018 – Jun. 2022

Experience

Microsoft	Redmond, WA
Research Intern	Jun. 2026 – Now
• Building an LLM-agent system that translates clinical guidelines into interpretable, executable diagnostic scripts, then iteratively refines them by validating against labeled patient cases.	
• Grounding each refinement in failing and successful cases, with every edit justified by explicit reasoning and logged, yielding a fully auditable and interpretable diagnostic system.	

Publications

MicroDiffuse3D: A Foundation Model for 3D Microscopy Imaging Restoration	2026
Yongkang Li, Brian Wong, King Wai Chiu, Hanwen Xu, Tangqi Fang, Erin Dunnington, Dan Fu, Sheng Wang	
<i>Nature Communications</i> , under review.	
Evo2HiC: A Multimodal Foundation Model for Integrative Analysis of Genome Sequence and Architecture	2025
Fangqi Fang*, Yongkang Li* , Xiao Wang*, Zhiping Xiao, Shengqi Hang, Ghulam Murtaza, Junwei Yang, Hanwen Xu, Anupama Jha, William Noble, Sheng Wang	
<i>Nature Genetics</i> , in revision.	

Research Project

MicroDiffuse3D: Foundation Model for 3D Microscopy Imaging Restoration	2024 – 2026
• Developed MicroDiffuse3D, the first volumetric restoration foundation model for 3D microscopy imaging.	
• Targeting the 16-fold volumetric sparsity super-resolution task, achieved state-of-the-art performance across benchmark super-resolution datasets, improving MS-SSIM by 0.082 on average.	
Evo2HiC: Multimodal Foundation Model for Genome Sequence and Architecture	2025 – 2026
• Developed Evo2HiC, a HiC-regularized distillation model of Evo2 that integrates long-context genomic modeling with HiC structural information into a compact and efficient CNN encoder.	
• Enabled a wide range of downstream applications, cross-cell-line epigenomic prediction, interpretable motif identification, and cross-species HiC resolution enhancement for 177 species.	

Selected Awards and Honors

Second Place in Henan College Entrance Exam (2nd out of 983,000 students)	Jun. 2018
First Prize of Freshmen Scholarship	Dec. 2018
Merit Undergraduate Research	Mar. 2022
Academic Star and Outstanding Graduate	Jun. 2022
